

Data Analytics Process

Application in Real Life Scenario Case Study/PPT

Description : Going for a super market to buy vegetables or fruits or meat.

- 1. Plan** : Firstly we will decide what vegetables/fruits or meat we need to buy from the supermarket.
- 2. Prepare** : We will think how much money we will spend to buy the groceries. How much I spend for vegetables and how much I spend for fruits.
- 3. Process** : I must determine my specific data needs, like considering which vegetables or fruits I will eat. I decide between various options like carrots, potatoes, ladyfingers, leafy vegetables etc. Or choosing from various options like oranges, apples, bananas etc.
- 4. Analyze** : I will analyse which vegetables are best in that season and which vegetables are cheap in that particular season. And will also analyze what are the seasonal fruits to buy.
- 5. Share** : Now I express my requirements to the shopkeeper to help me to identify best vegetables or fruits.
- 6. Act** : Finally you buy the vegetables/ fruits you want from the supermarket.
